ORCID & Its HKU Implementation

The problem

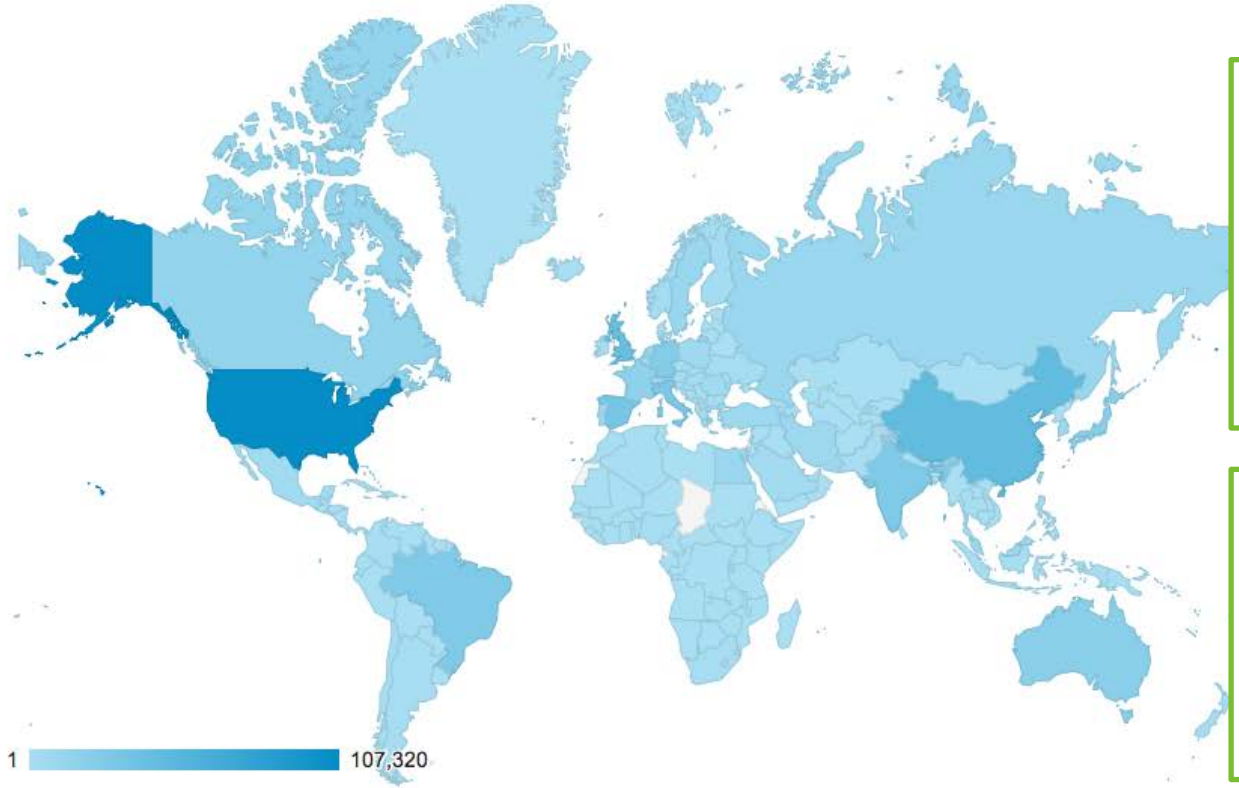
The research community has lacked the ability to link researchers with their professional activities.

As a researcher, you want to

- ✓ **ensure your work is discoverable** and **connected to you** throughout your career;
- ✓ **minimize the time** you spend entering repetitive data online; and
- ✓ **eliminate name ambiguity**, distinguishing you from other researchers and ensuring proper attribution.

How can ORCID help?

ORCID provides you a unique and persistent personal identifier that connects you and your research activities throughout your career.



Open, non-profit, community-driven organization

Website and registry localization for multiple languages in process

More than **280,000 iDs** issued to date

Registry use is **international**

What does an ORCID page look like?

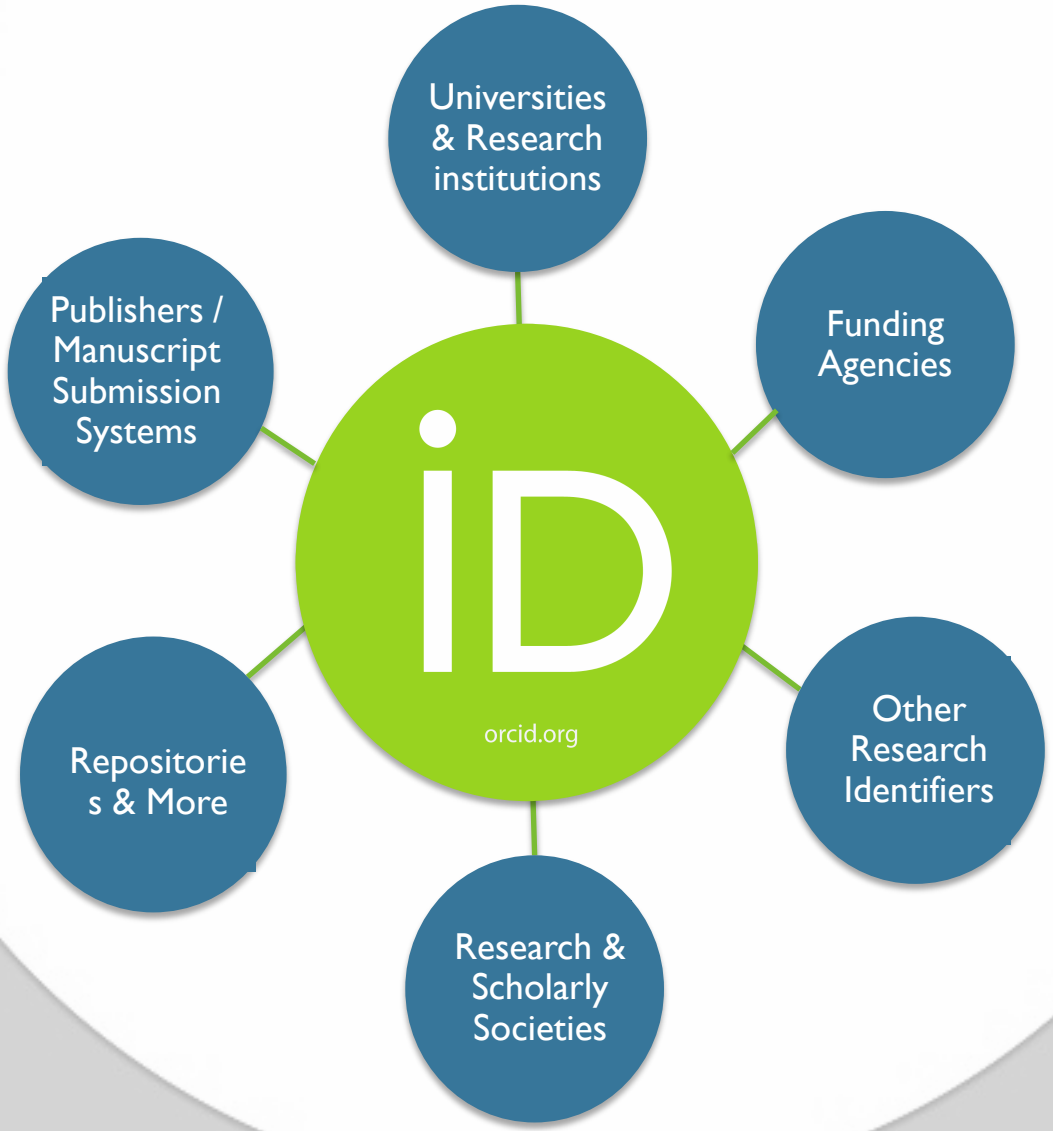
iDea for ORCID site?

ORCID is a hub connecting the research landscape

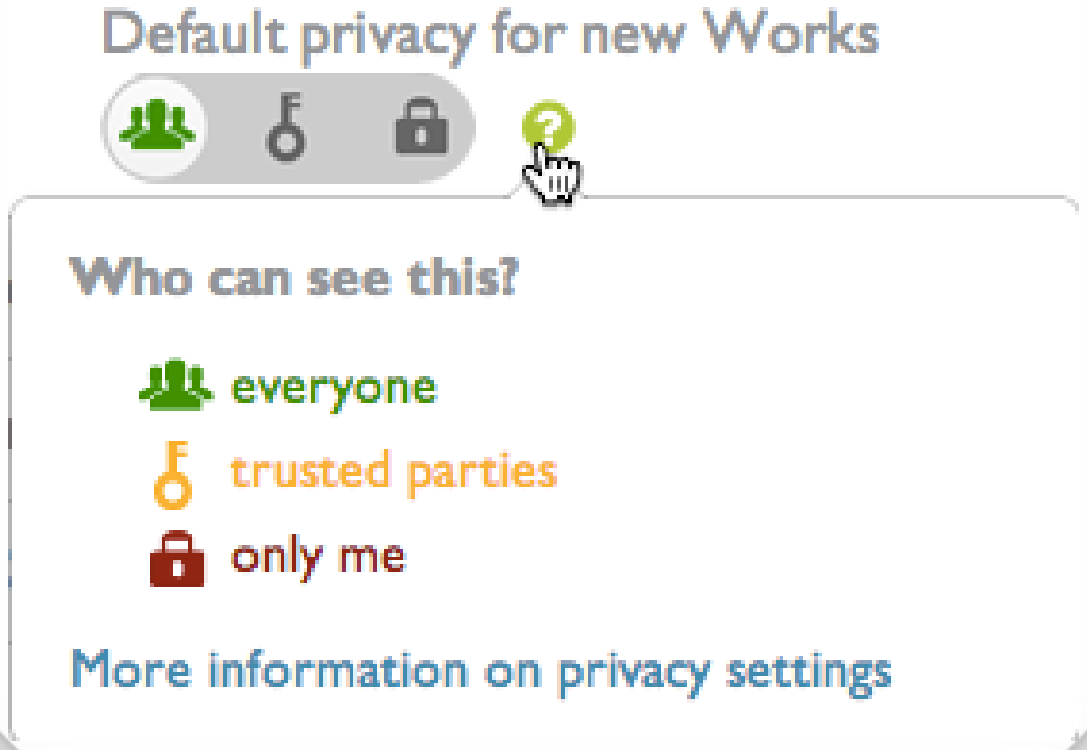


Registration is free and fast

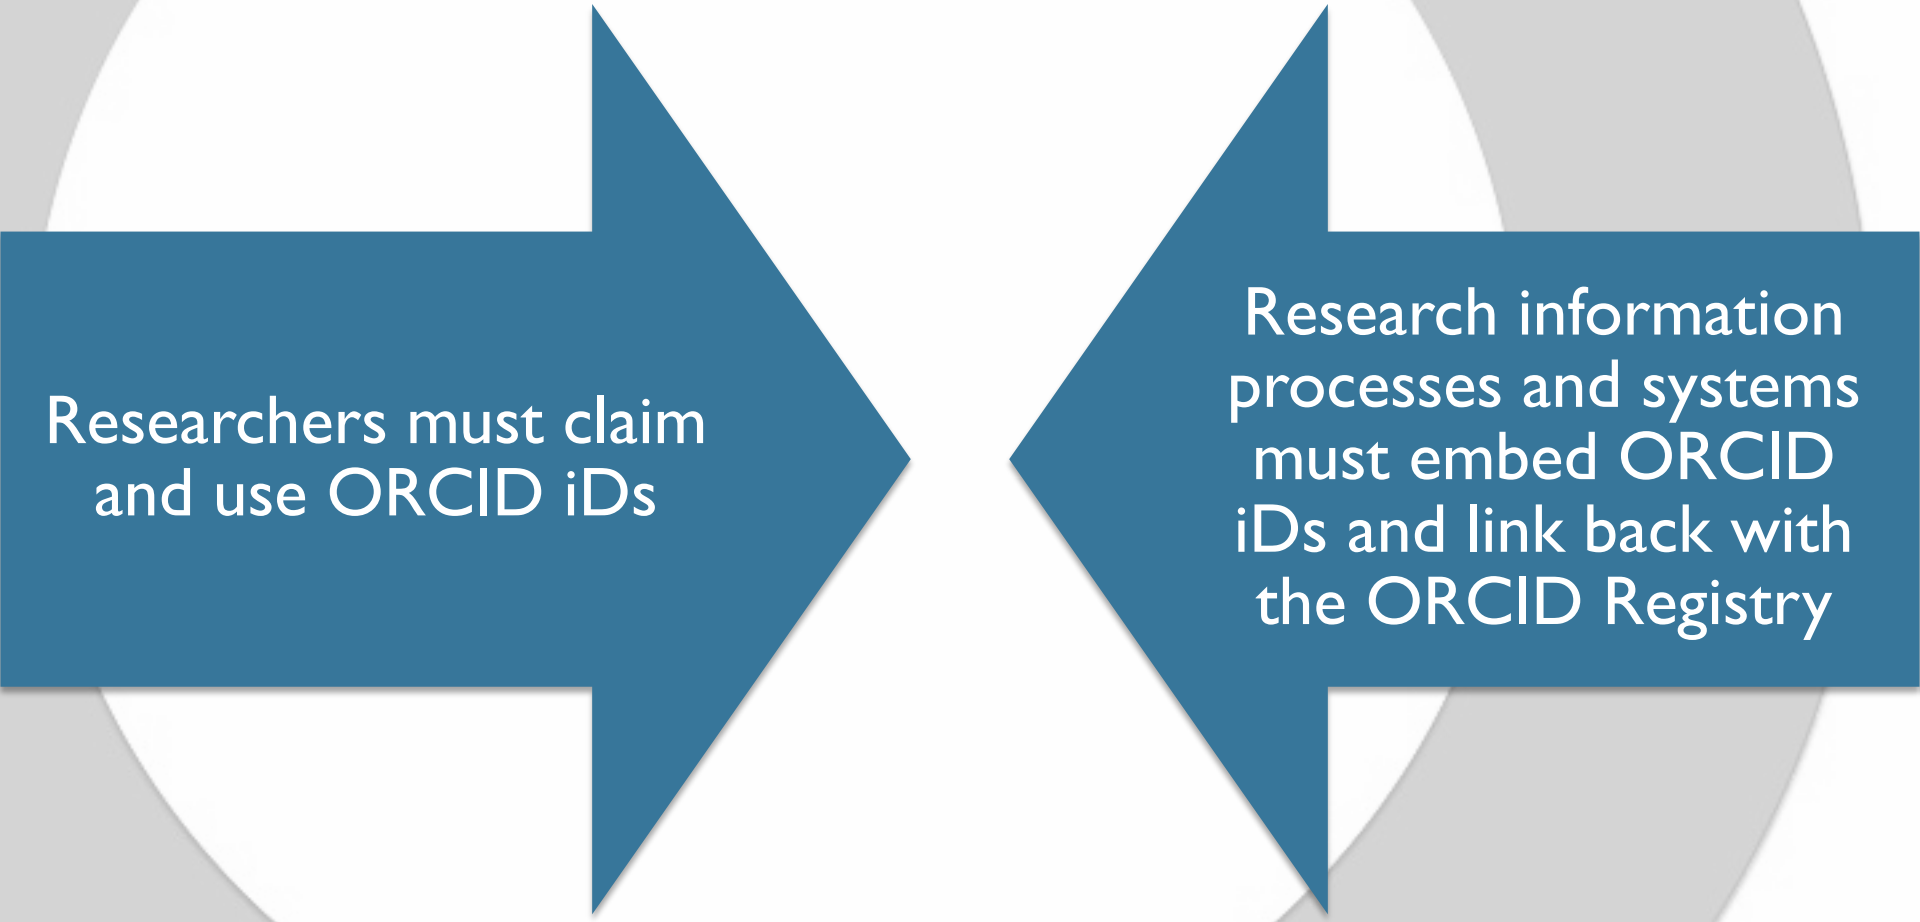
Registration is easy. Signing up for an ORCID iD only takes seconds. Then, enhance your ORCID record with your professional activities and begin to use your ORCID iD as you submit publications, apply for grants, and in any research workflow to ensure you get credit for your work.

You control the privacy

You determine what, how, and with whom the information in your ORCID record is shared.

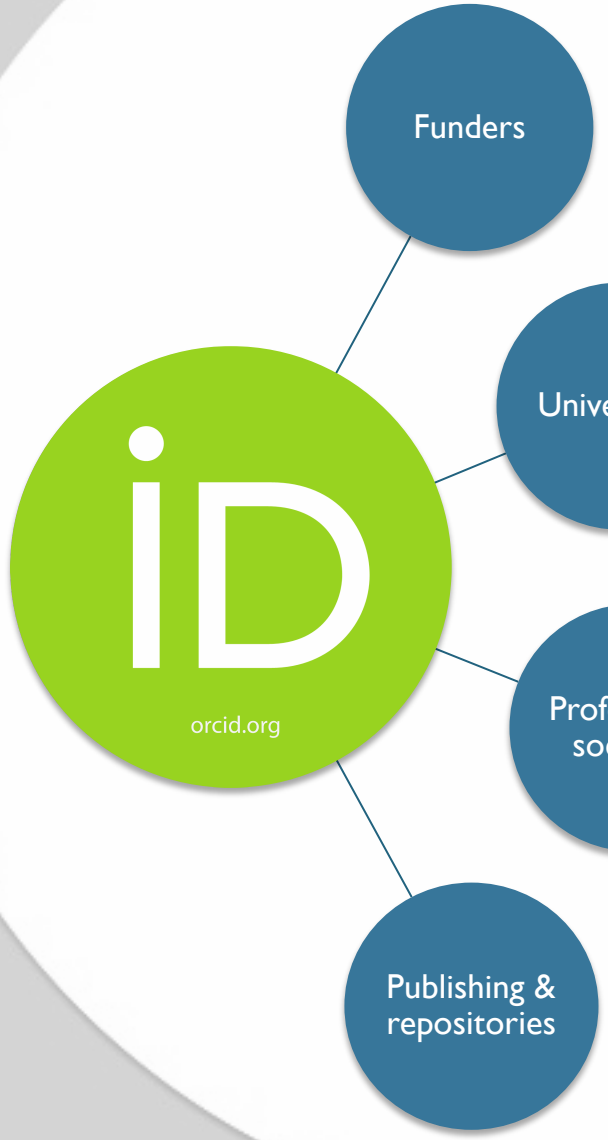


For benefits to be realized…



Benefits to Researchers

Improve discoverability & reduce repetitive data entry



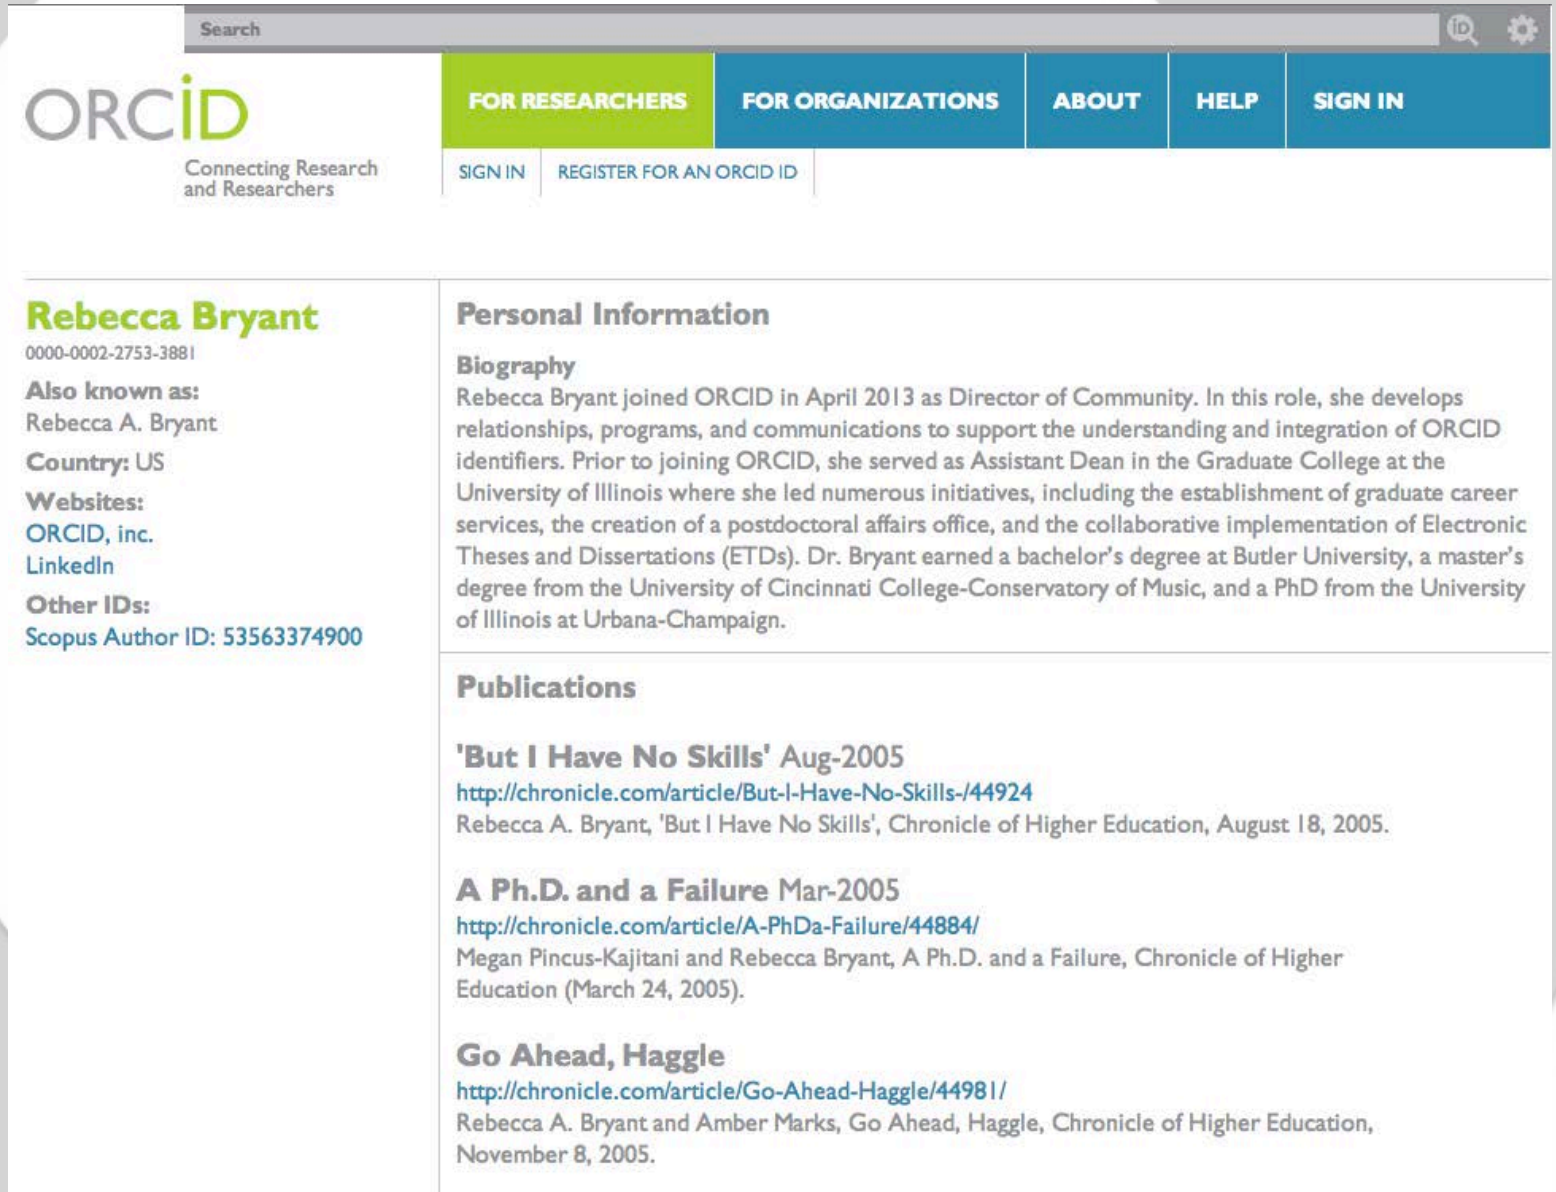
- Funders are embedding ORCID identifiers in their grant submission systems and awardee databases

- Opportunities for integration with:
  - Researcher profile systems
  - Institutional repositories
  - Grants & contracts
  - HR systems
  - Safety/research conduct training & compliance

- Associations are integrating into membership renewal, publishing and meeting registration processes

- Publishers are integrating into manuscript submission and author/reviewer databases
- Repositories linking with deposition, search and updating
- Both are linking internal ID with ORCID record

Reduce time-consuming data entry & activity reporting



Eliminate name ambiguity

And on and on it goes …

2. Connect your ORCID iD

IMPORT RESEARCH ACTIVITIES

X

ORCID has been working with many member organizations to make it easy to connect your ORCID iD, and import information from their records. Choose one of the imports wizards to get started.

Scopus to ORCID

Import your Identifier, profile and publications. The wizard helps you find the correct Scopus profile and to confirm your publications. You can then import the identifier and list of publications into ORCID. Any changes you make will be submitted to the Feedback team to update your Scopus profile.

CrossRef Metadata Search

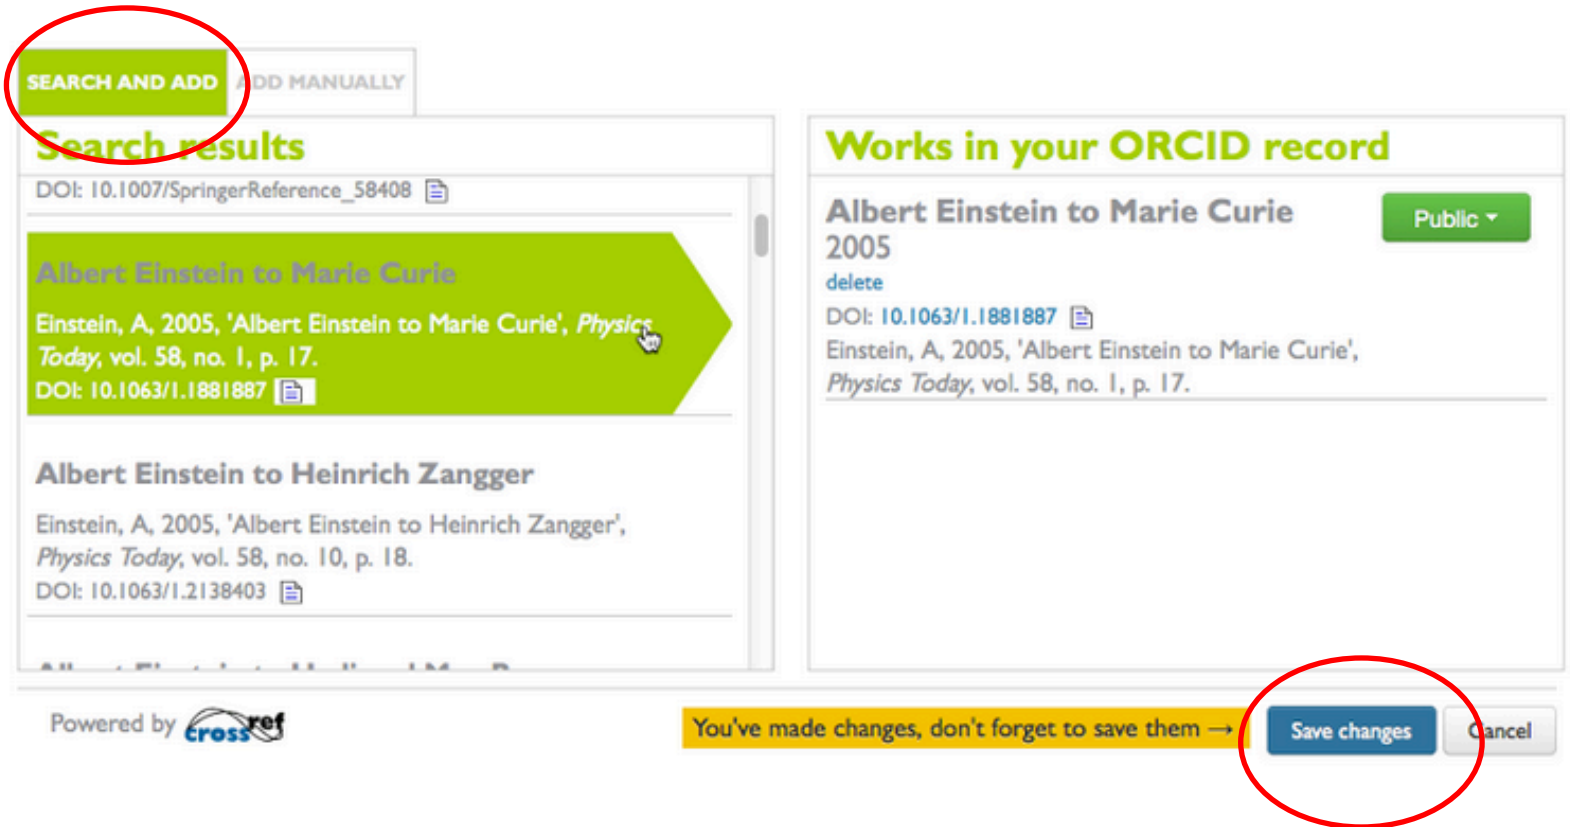
Search CrossRef's comprehensive metadata on journal articles, conference proceedings and monographs. Easily add search results to your ORCID profile.

Don't see what you are looking for?

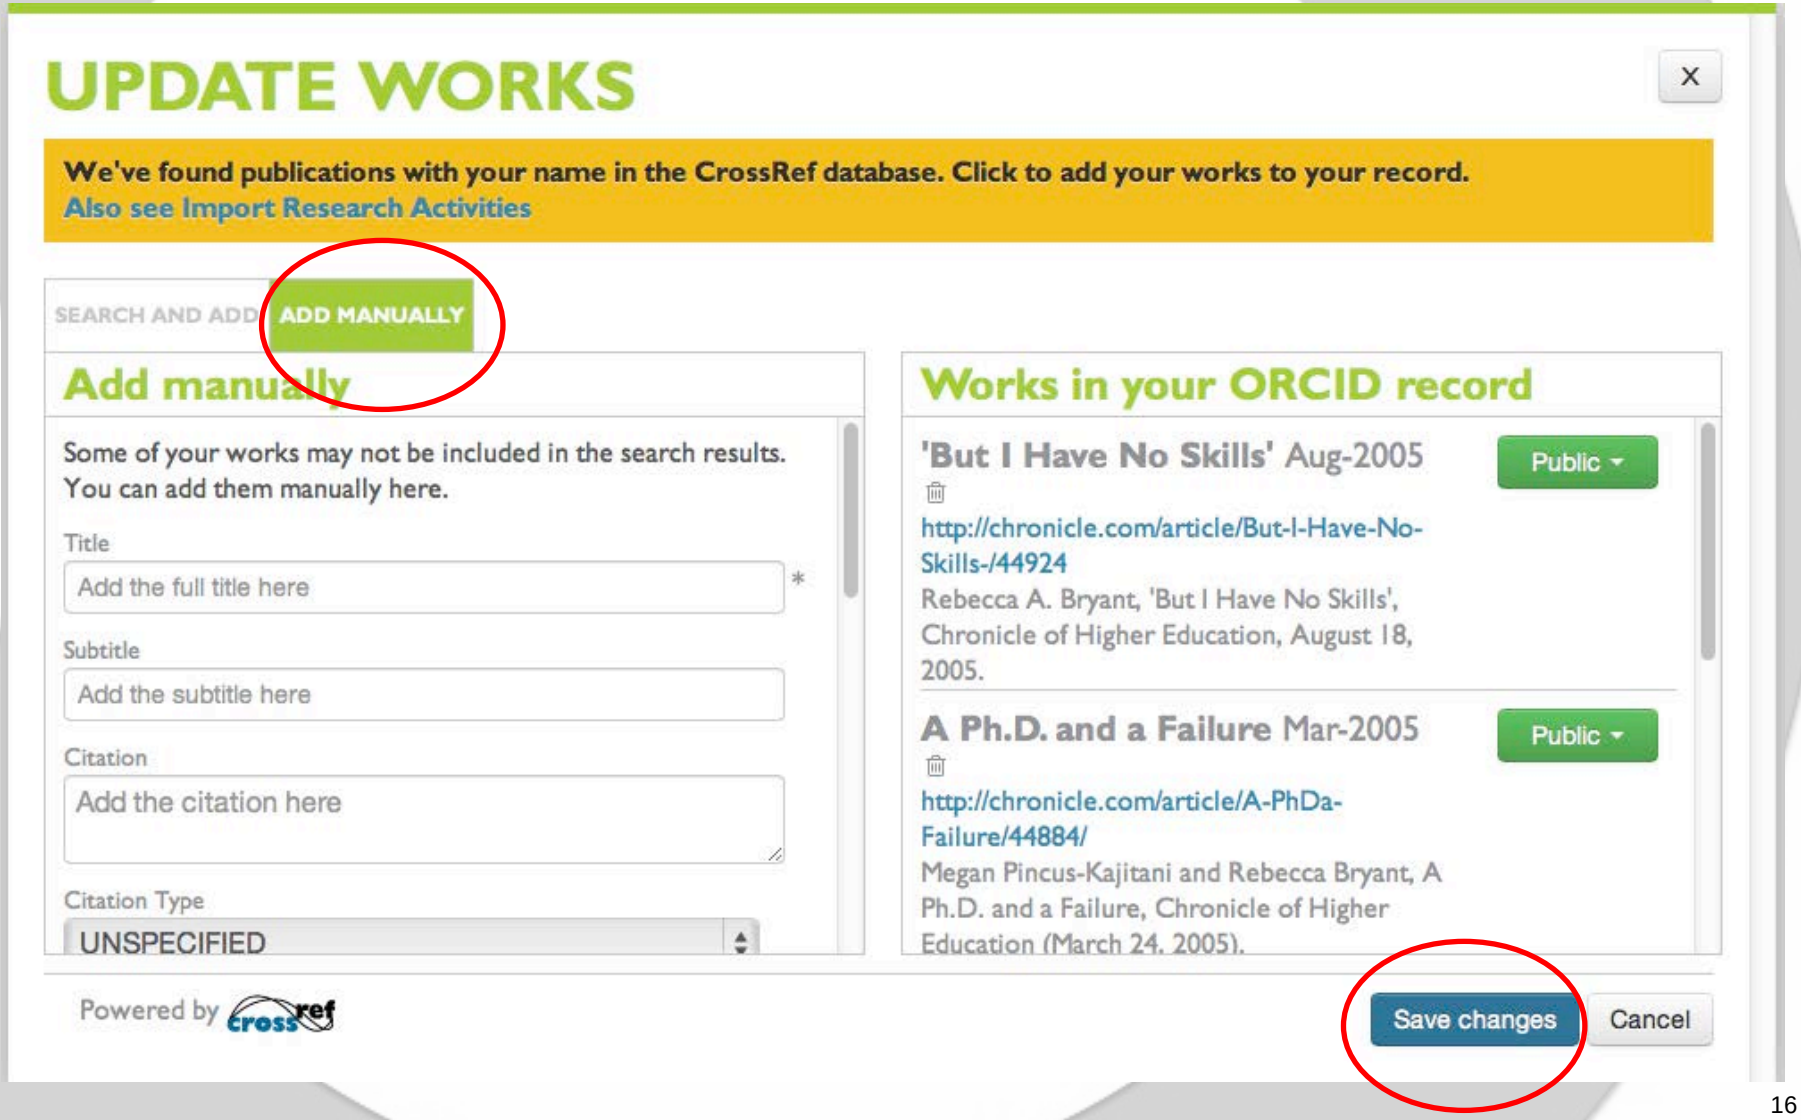
2. Connect your ORCID iD: search and add works

Search and Add Works

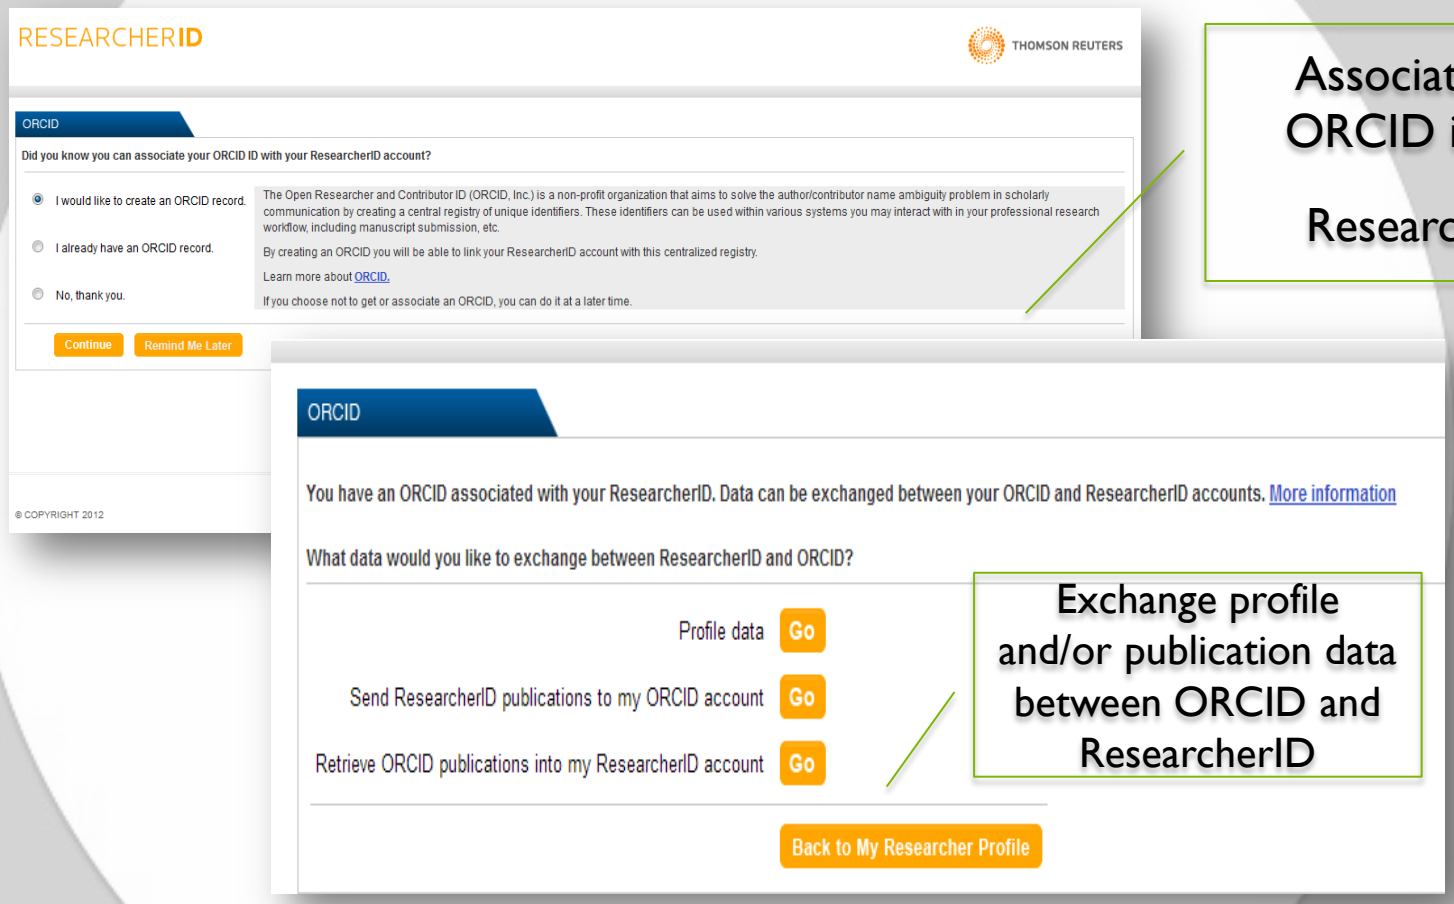
To add works click the Update link under the Works heading in your ORCID Record. Search and add is the default method and you should see a list of publications associated with your name in the left column of the Update Works window. The listed works are the search results of a CrossRef search on your name. To add a publication from this list to your profile just click on it. It will move to the Works in your ORCID record column on the right and you can save it by clicking Save changes in the bottom right corner. If you have already added works to your record, they will be listed in the right column.



2. Connect your ORCID iD: manually add works



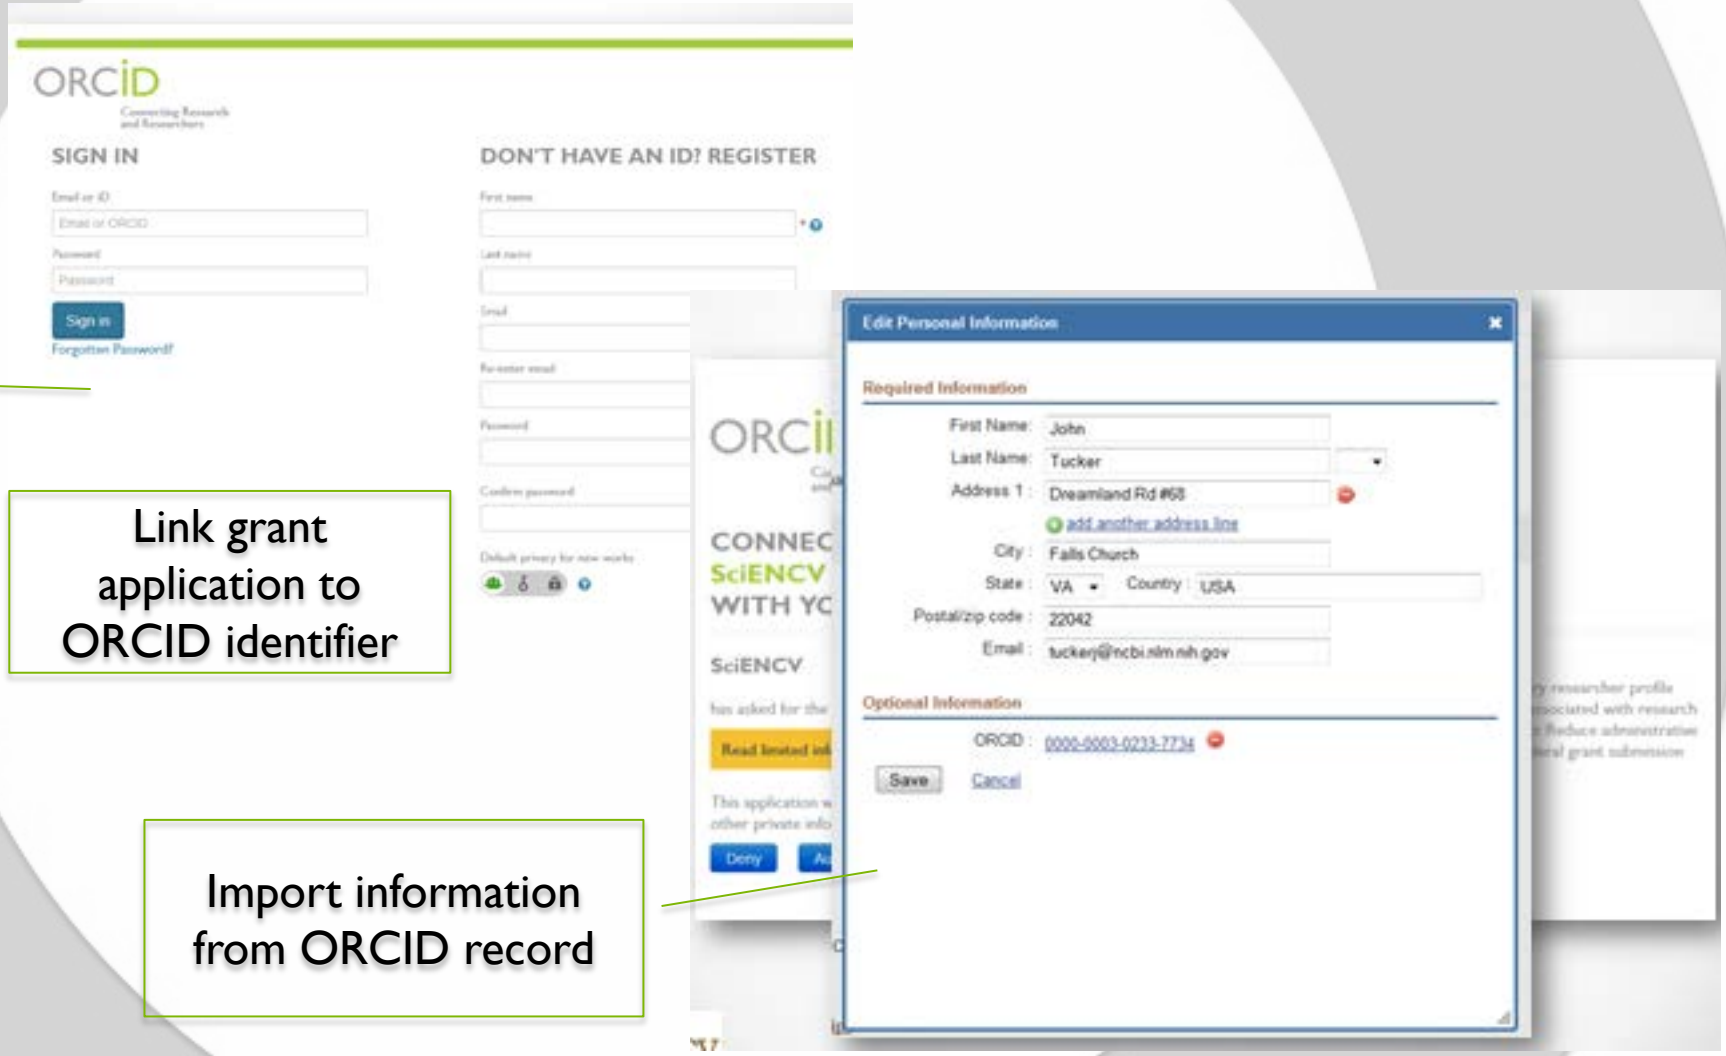
2. Connect your ORCID iD: link to other identifiers



Associate your ORCID iD with ResearcherID

Exchange profile and/or publication data between ORCID and ResearcherID

3. Use your iD: grant applications



Link grant application to ORCID identifier

Import information from ORCID record

3. Use your iD: manuscript submission

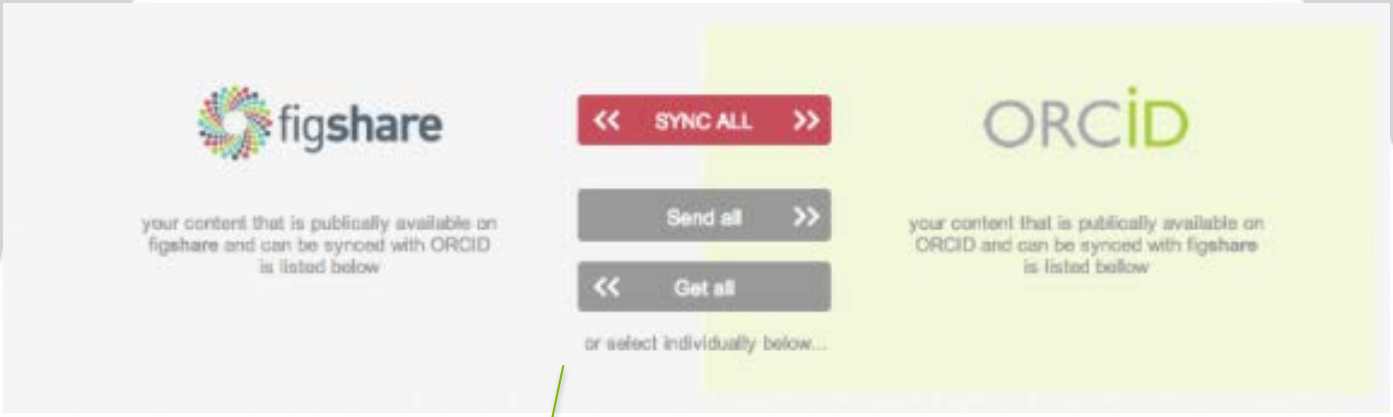
3. Use your ORCID iD: linking to datasets



You can now link your ORCID iD with your data, enabling you to display your datasets in your ORCID profile.

New ORCID-integrated data citation tool

Posted May 13, 2013 by Gudmundur Thorisson & filed under Uncategorized.

We are pleased to announce the beta launch of a new service for searching and claiming works in DataCite:
http://datacite.labs.orcid-eu.org

The tool enables users to search the DataCite Metadata Store for their works, and subsequently to add (or claim) those research outputs – including datasets, software, and other types – to their ORCID profile. This should increase the visibility of these research outputs, and will make it easier to use these data citations in applications that connect to the ORCID Registry – ImpactStory is one of several services already doing this.

The new service also provides formatted citations in several popular citation styles, supports COinS, links to related resources, and displays the attached Creative Commons license where this information is available. In addition to datasets, the DataCite Metadata Store of course also contains many text documents from academic publishers and services such as figshare or PeerJ

The University of Hong Kong ORCID Record Creation

In October 2013, The University will create ORCID records for HKU faculty that now have a HKU ResearcherPage in The HKU Scholars Hub – usually staff with UGC status of A ~ I, sometimes O. These faculty could choose to opt-out and no ORCID will be created for them. If you already have an ORCID record, please click "Provide Existing ORCID" to allow us to associate your HKU ResearcherPage with your ORCID identifier.

If you prefer to manually create your own ORCID record, you may click on, "Go to ORCID, Manually Create". After you do so, could you please return to this page, and click on "Provide Existing ORCID", and input your new ORCID iD there.

Other HKU faculty and students wishing an ORCID record can also go to ORCID and manually create one for themselves.

Please note that publishers have begun asking for ORCID identifiers during the manuscript submission process, and there are several benefits to getting an ORCID iD, which will follow you throughout your scholarly career. For more information visit http://hub.hku.hk/orcid/about.jsp.

Provide Existing ORCID | Opt-Out of ORCID | Go to ORCiD. Manually Create

(You will be prompted for your HKU Portal username/pin with a simple form to complete the process)

Add information to a user's ORCID record

Abstract

Background. Salvianolic acid B (Sal B) is one of the most bioactive components of Salvia miltiorrhiza, a traditional Chinese herbal medicine that has been commonly used for prevention and treatment of cerebrovascular disorders. However, the mechanism responsible for such protective effects remains largely unknown. It has been considered that cerebral endothelium apoptosis caused by reactive oxygen species including hydrogen peroxide (H_2O_2) is implicated in the pathogenesis of cerebrovascular disorders. Methodology and Principal Findings. By examining the effect of Sal B on H_2O_2-induced apoptosis in rat cerebral microvascular endothelial cells (rCMECs), we found that Sal B pretreatment significantly attenuated H_2O_2-induced apoptosis in rCMECs. We next examined the signaling cascade(s) involved in Sal B-mediated anti-apoptotic effects. We showed that H_2O_2 induces rCMECs apoptosis mainly through the PI3K/ERK pathway, since a PI3K inhibitor (LY294002) blocked ERK activation caused by H_2O_2 and a specific inhibitor of MEK (U0126) protected cells from apoptosis. On the other hand, blockage of the PI3K/Akt pathway abrogated the protective effect conferred by Sal B and potentated H_2O_2-induced apoptosis, suggesting that Sal B prevents H_2O_2-induced apoptosis predominantly through the PI3K/Akt (upstream of ERK) pathway. Significance. Our findings provide the first evidence that H_2O_2 induces rCMECs apoptosis via the PI3K/MEK/ERK pathway and that Sal B protects rCMECs against H_2O_2-induced apoptosis through the PI3K/Akt/Raf/MEK/ERK pathway. 2007 Liu et al.
