a place of mind

THE UNIVERSITY OF BRITISH COLUMBIA

introduction

- our general approach
- archives and born digital material
- digitized collections and IR material
- work still to come

our approach

- Developing a comprehensive preservation system for UBC Library:
 - New and legacy born digital archival material
 - cIRcle, DSpace-based repository
 - Digitized collections in CONTENTdm
 - Websites
 - Research data
- Working with Artefactual Systems Inc.

our strategy

- Use Archivematica as a tool to apply OAIS-compliant preservation processes
- Integrate Archivematica with existing systems used to manage digital objects
- Build internal technical and staff capacity

working with Artefactual

- 2011: gap analysis, identification of pilot projects, early testing of archivematica, begin tackling legacy media
- 2012: develop procedures for born-digital material, continue archivematica testing, begin CONTENTdm and DSpace integration development and testing
- 2013: move to archival storage, production services using archivematica 1.0

archivematica

- “a free and open source digital preservation system that is designed to maintain standards-based, long term access to collections of digital objects” <http://www.archivematica.org>
- micro-services provide integrated suite of software tools in compliance with ISO-OAIS model

archivematica

The screenshot displays the Archivematica Dashboard interface. The browser window title is "Archivematica Dashboard - Ingest - Mozilla Firefox". The address bar shows the URL "http://thehold.library.ubc.ca/ingest/". The dashboard header includes the Archivematica logo and navigation tabs: Transfer, Ingest, Archival storage, Preservation planning, Access, Administration, and DiAdmin01. The user is connected.

The main content area shows a list of Submission Information Packages. Two packages are visible:

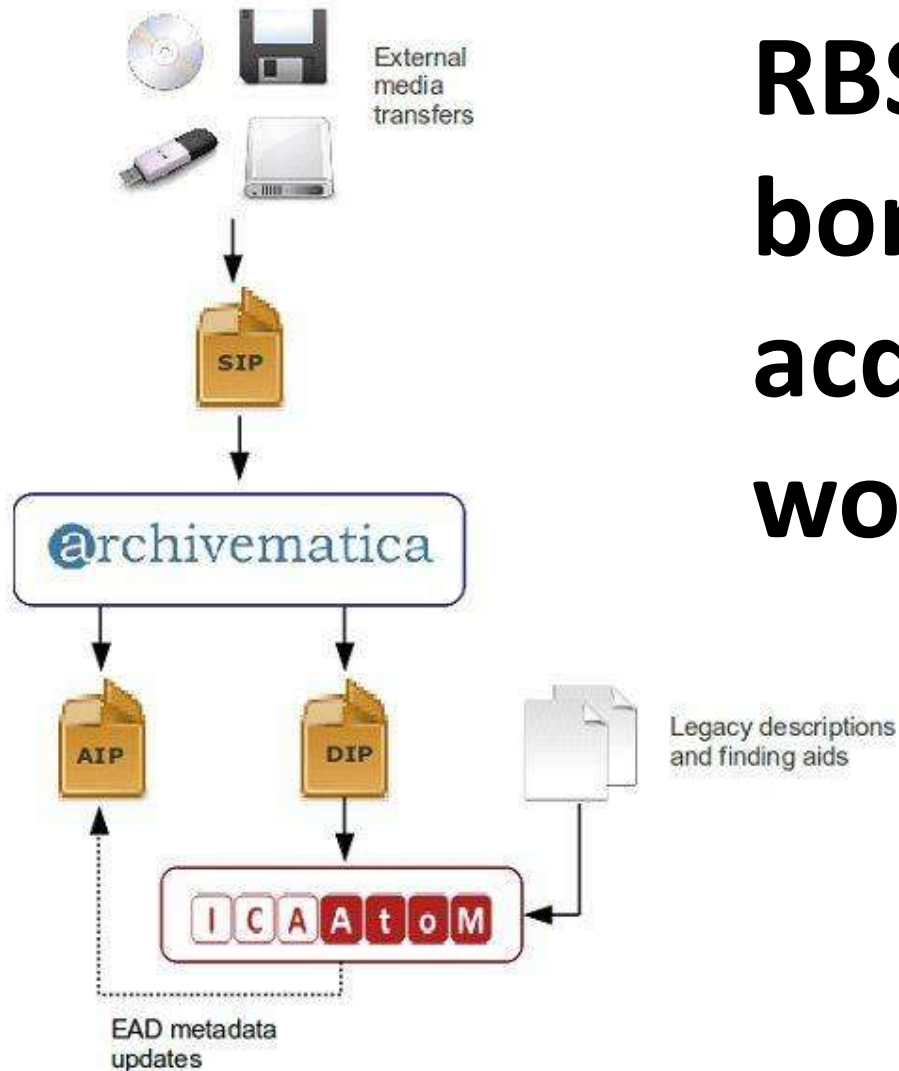

Submission Information Package	UUID	Ingest start time
Evelyn	bb6fc19f-12e3-4304-0cb2-0e9902374e6d	2012-09-19 10:08
Digitized	eba921be-efac-4a11-92a5-843cc776401e	2012-09-17 15:25

Each package has a list of jobs and micro-services. The "Evelyn" package shows a "Job: Store AP" with a status of "Awaiting decision" and a "Job: Move to the store AP approval directory" with a status of "Completed successfully". The "Digitized" package shows a "Job: Store AP" with a status of "Awaiting decision" and a "Job: Move to the store AP approval directory" with a status of "Completed successfully".

legacy media

- Floppy and optical disks acquired with primarily analogue collections.
- Hardware set-up and technological challenges
- Intellectual challenges:
 - Arrangement and description
 - Selection of material
 - Rights

RBSC/UA born-digital acquisition workflow

The Library

a place of mind

THE UNIVERSITY OF BRITISH COLUMBIA

a new acquisition

- "First" born-digital acquisition
- Donor questionnaire
- Physical transfer of files
 - Hardware and software
 - Workflow documentation
- Donor gift agreement
- First AIPs stored April 2013; still in processing

preservation levels

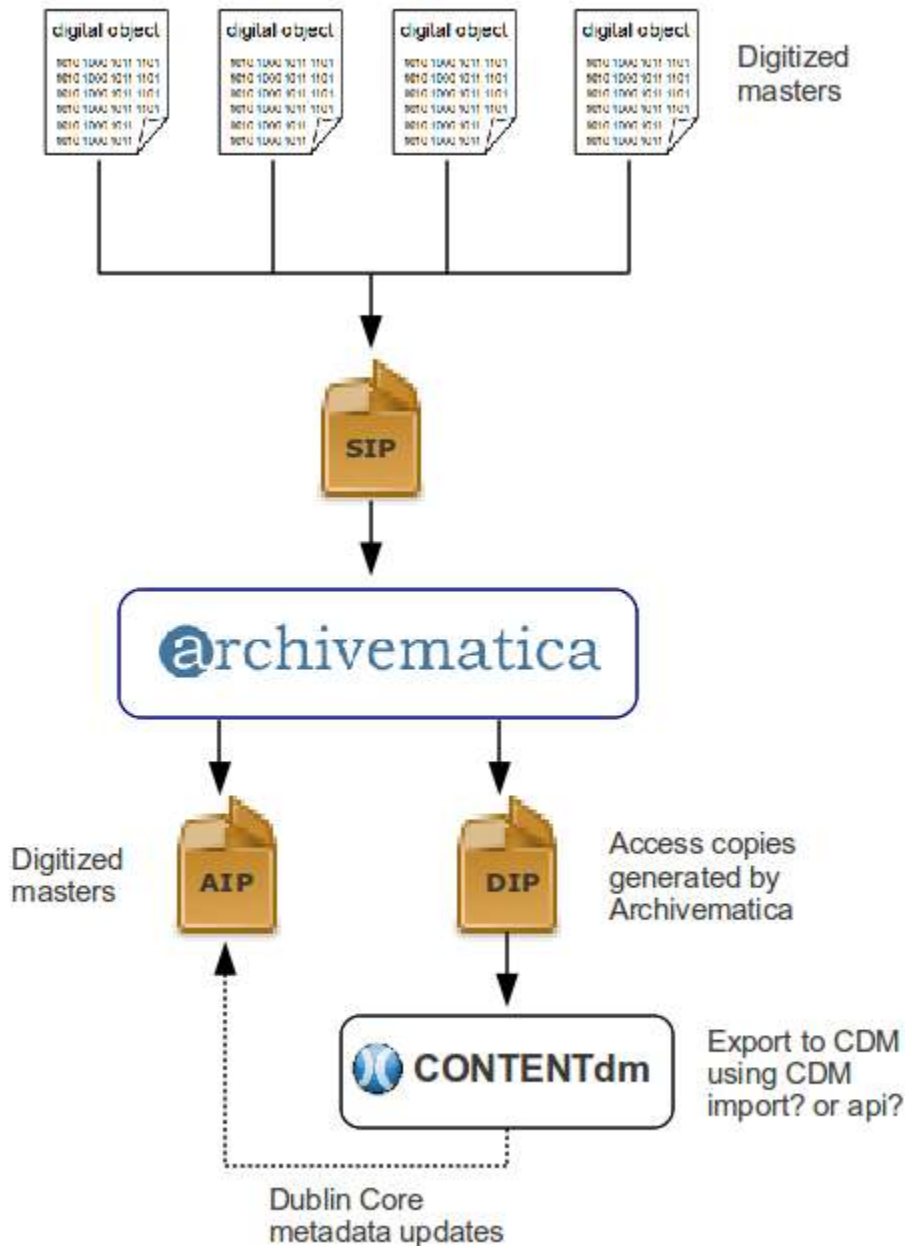

Level of Preservation	Use case	Minimum tools
Level 1	Imaging files from working hard drives, directly from creator	Write blocker, file synchronization software (e.g. Grsync)
Level 2	Imaging/copying files from external media	File synchronization software (e.g. Grsync), write blocker if possible
Level 3	Preserving external media only	Hardware necessary to open media (floppy drive, optical drive, etc)

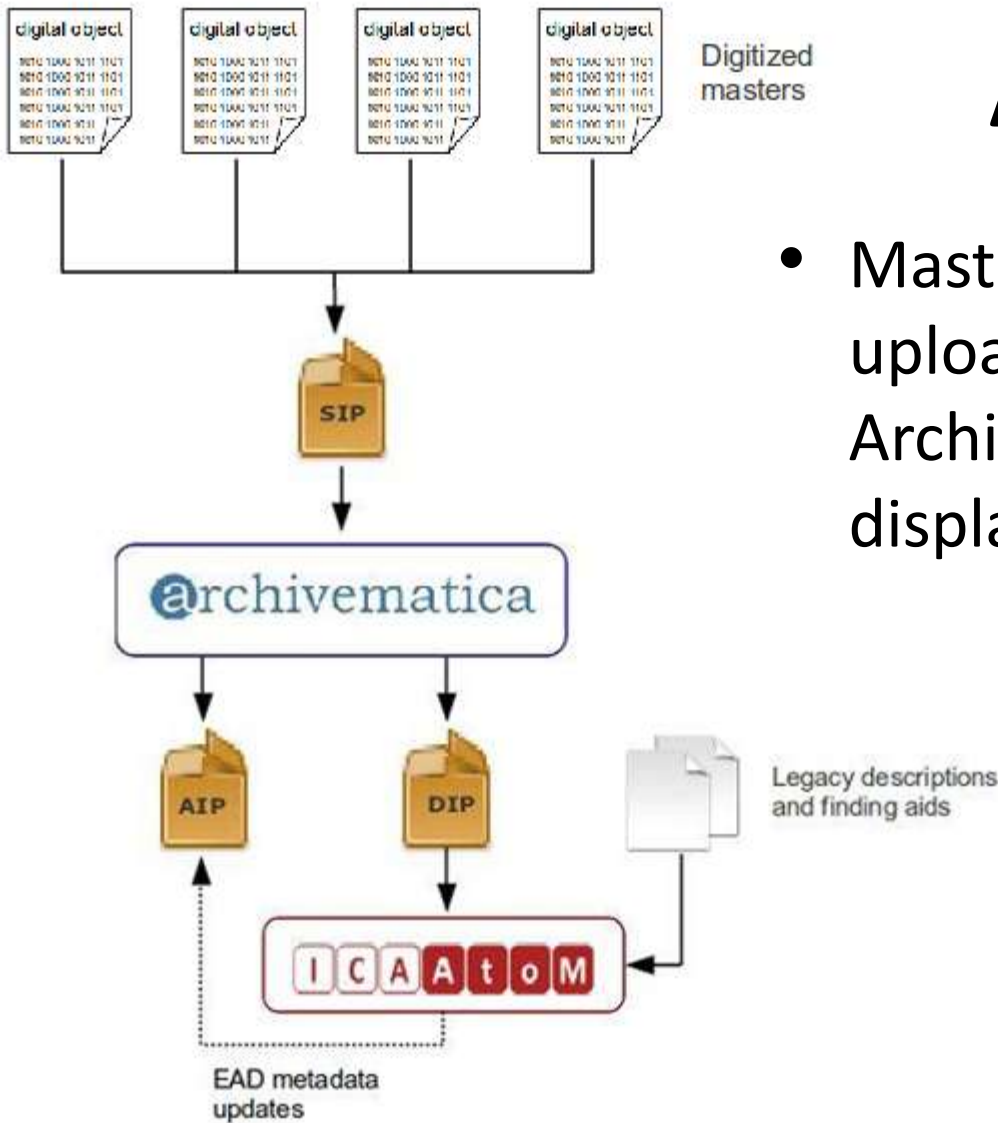

cIRcle (DSpace)

- Archivematica receives submissions from DSpace
- Also have Archivematica to DSpace workflow

CONTENTdm

- Master files uploaded to Archivematica
- Archivematica produces access versions and pushes to CONTENTdm

Digitized masters

AtoM

- Master files and PDFs uploaded to Archivematica for display in AtoM

Public access provided through a unified discovery interface integrating Archivemática index and UBC Library document viewer application

- UBC faculty & students
- CHRP contributors
- Other

automated OAI-PMH updates

DIP reconfigured for upload to CONTENTdm

- UBC librarians & archivists
- Digital Initiatives, RBSC, Archives

- External media acquisitions
- Born-digital network transfers
- Web archiving harvests

processing workstations

digitization workstations

UBC SAN & backup

LOCKSS server

next steps

- Create documentation, TRAC self-audit
- Fine-tune archival storage, scalability testing
- Research data
- BitCurator testing

conclusion

- Greater comfort with and understanding of the challenges around archiving digitized and born digital material
- Establishing comprehensive digital preservation program is complex!
- Having tools is important, also need policies and procedures
