

# Demonstrating Library's New Values in the Research Workflow at HKUST

Pacific Rim Research Libraries Alliance (PRRLA) 2017 Annual Meeting,  
Zhejiang University, Hangzhou, China. October 17 – 20, 2017

# Outlines

- **Research Workflow and Library Support in a Changing Landscape**
- **Research Support at HKUST**
  - Institutional Repository
  - Scholarly Publications Database
  - Research Assessment Exercise (RAE)
  - SPD Metadata Cleansing Exercise
- **Final Thoughts and Recommendation**

# HKUST At a Glance

## Background

- **Established: 1991**
- **Mission:** to advance learning and knowledge through teaching and research
- **Vision:** to be a leading university with significant international impact and strong local commitment

## Faculty & Student

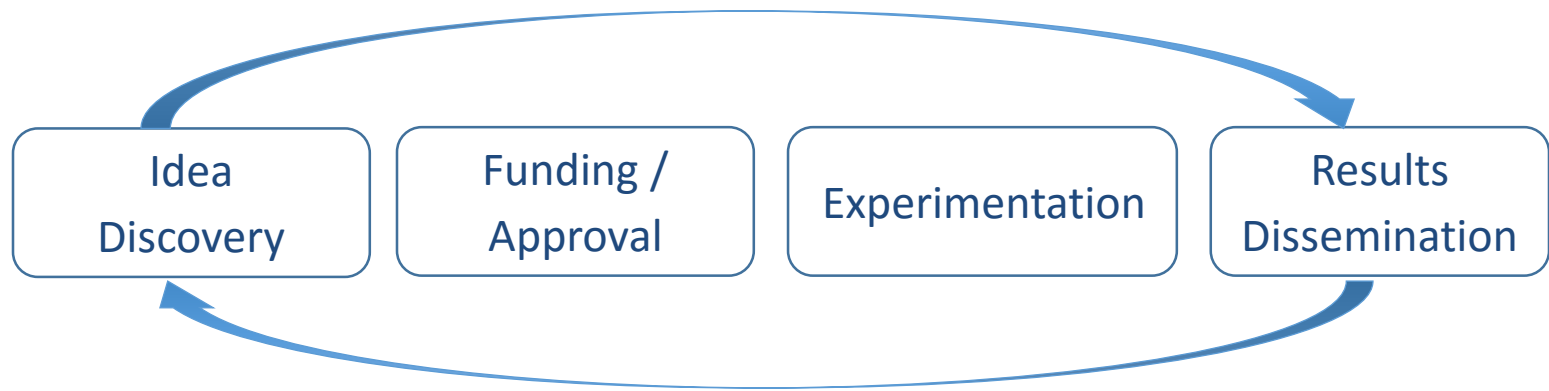

- Faculty (as of Jun 2017): **641 faculty member** (regular)
- Undergraduate: **9,334**
- Postgraduate: **4,874**

## Schools and Research

- **4 Schools** (business, engineering, science, social sciences and humanities)
- **969 sponsored projects** (2015-2016)

# Research Workflow and Library Support

## Library Support Across the Research Cycle

### Idea Discovery

Access to information, journal, etc (collection development)

Develop information skill (workshops and seminars)

Research Consultation

### Funding

Prepare grant proposal (incl. data management plan)

Advise on funding and open access (OA) requirements

### Experimentation

Provide virtual research environment (VRE) tools and services

### Dissemination

Select journal / Identify OA journals

Provide advice and support on copyright

Track research impact (assessment)

Promotion

Preservation

# What do Researchers Think?

In 2009, OCLC and Research Information Network (RIN) initiated an investigation about tools and services used/desired by researchers in higher education institutions in U.S and U.K

These are the specific areas that covered in the study:

- Learning about grant funding opportunities
- Managing intellectual property and exploiting commercial value
- **Finding potential collaborators and making themselves visible to others**
- **Management and storage of documents and data sets**
- Analysis of large text and data files
- Improving information retrieval and management skills
- Managing literature citations
- Choosing where to publish or alternative forms of dissemination
- **Support for promotion and tenure**
- Professional standing
- **Managing pre-prints, publications and post-prints**

# Research Support at HKUST – Institutional Repository (IR)

## Background

- Established in 2003; run on DSpace
- Covers: journal articles, conference papers, theses, book chapters, patents, pre-prints, post-prints, presentations, research reports, working papers, data, etc
- All documents deposited are in **Open Access**
- **OpenURL link resolver** (Find@HKUST) to discover published version of the document
- Web service **API** to retrieve **citation counts** from Scopus and Web of Science in real time

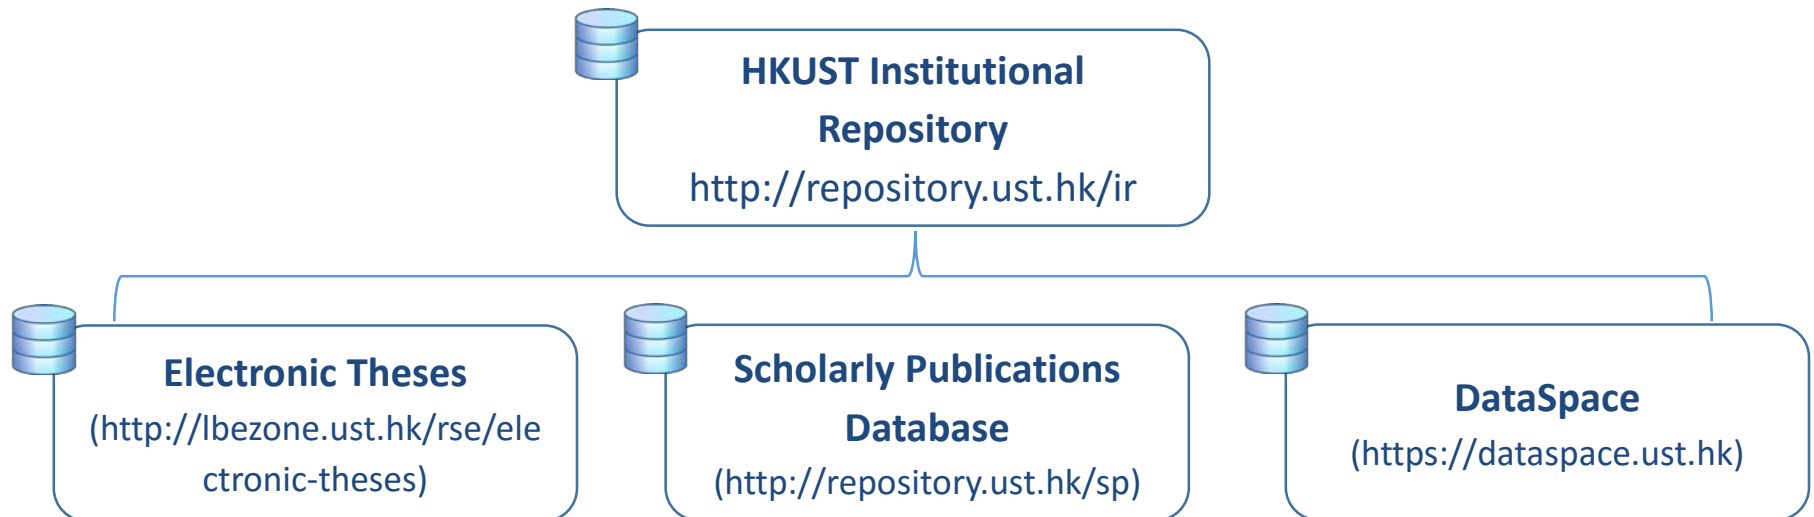

## Limitations and Challenges

- No University IR **mandate**
- **OA documents only**; covers a small subset of the total output of the University

# Research Support at HKUST – Scholarly Publications Database (SPD)

## Background

- Started in 2007; **HKUST Scholarly Publications Index**
- In 2009 – initiated a joint knowledge harvesting project with the research office (VPRGO) to build **HKUST Scholarly Publications Database (includes publication index and scholar profiles)**

# SPD Feature Highlights & Technology

Search Publications... All Fields Find Advanced

## Publication Index

- Interlinking between publications and profiles
- Citation counts
- Full-text via DOI, Scopus, WOS, OpenURL, HKUST IR (OA only)

## Scholar Profile

- Showcase: publications, bibliometrics, research interests & research projects
- Author identifiers
- Co-authorship graph
- ORCID integration

## Technology

- Open source software (DSpace, VuFind, etc) + in-house development
- SPD API – for searching, deep linking and data harvesting
- Support OAI-PMH (Open Archives Initiative Protocol for Metadata Harvesting)
- Automation (in-house) tools for batch processing and data input via CMS (content management system)

## Building high-quality assay libraries for targeted analysis of SWATH MS data

**Authors**

- Schubert, Olga T.
- Gillet, Ludovic C.
- Collins, Ben C.
- Navarro, Pedro
- Rosenberger, George
- Wolski, Witold E.
- Lam, Henry H N 
- Amodè, Dario
- Manick, Parag
- MacLean, Brendan
- Aebersold, Ruedi

**Issue Date** 2015

**Source** Nature Protocols, v. 10, (3), March 2015

**Summary** Targeted proteomics by selected/mult... window acquisition of all theoretical... peptide identification. Quality and cov... the methods. Here we present a deta... reference libraries supporting targete... acquisition by discovery proteomics, assertion of peptide-spectrum matches (PSMs), generation of consensus spectra and compilation of MS coordinates that uniquely define each targeted peptide. Crucial steps such as false discovery rate (FDR) control, retention time normalization and handling of post-translationally modified peptides are detailed. Finally, we show how to use the library to extract SWATH data with the open-source software Skyline. The protocol takes 2-3 d to complete, depending on the extent of the library and the computational resources available.

# Value of IR and SPD to the Library

## Support the “Dissemination Stage” of researcher cycle

- ...making themselves visible to others (**promotion**)
- Management and storage of documents and data sets (**preservation**)
- Managing pre-prints, publications and post-prints (**preservation**)
- Support for promotion and tenure (**assessment**)

## Adoption by the University

- University Website (homepage) – faculty/research and publication directory
- Embed in departmental websites (e.g. CBME)
- Infrastructure to serve research output data for use by other systems
  - research output reporting system
  - faculty analytics (merit review)
- Publication of faculty profiles (print & electronic)
- **UGC Research Assessment Exercise (RAE) 2014 & 2020**

- Demonstrate library’s value and librarians’ expertise in supporting research
- Increase library’s visibility among university and researchers

# Research Assessment Exercise (RAE) 2014 - Overview

## Background

- The University Grants Committee of Hong Kong (UGC) – advises the Government on **funding needs** of all **8 higher education institutions** in Hong Kong
- Conducted 5 RAEs in 1993, 1996, 1999, 2006 and 2014; the results of RAEs linked to future university funding
- 3 dimensions\*: (i) **Research Output (RO)** – 80% of total rating; (ii) Research Grants and (iii) Esteem Measure
- Unlike previous assessment exercises, RAE 2014
  - Changed from paper submission to **electronic submission**
  - Required **a file storage** to seamless access to the documents by local and overseas reviewers
  - Required a robust electronic system and a new submission **workflow**

# Research Assessment Exercise (RAE) 2014 - Challenges

## Electronic Infrastructure

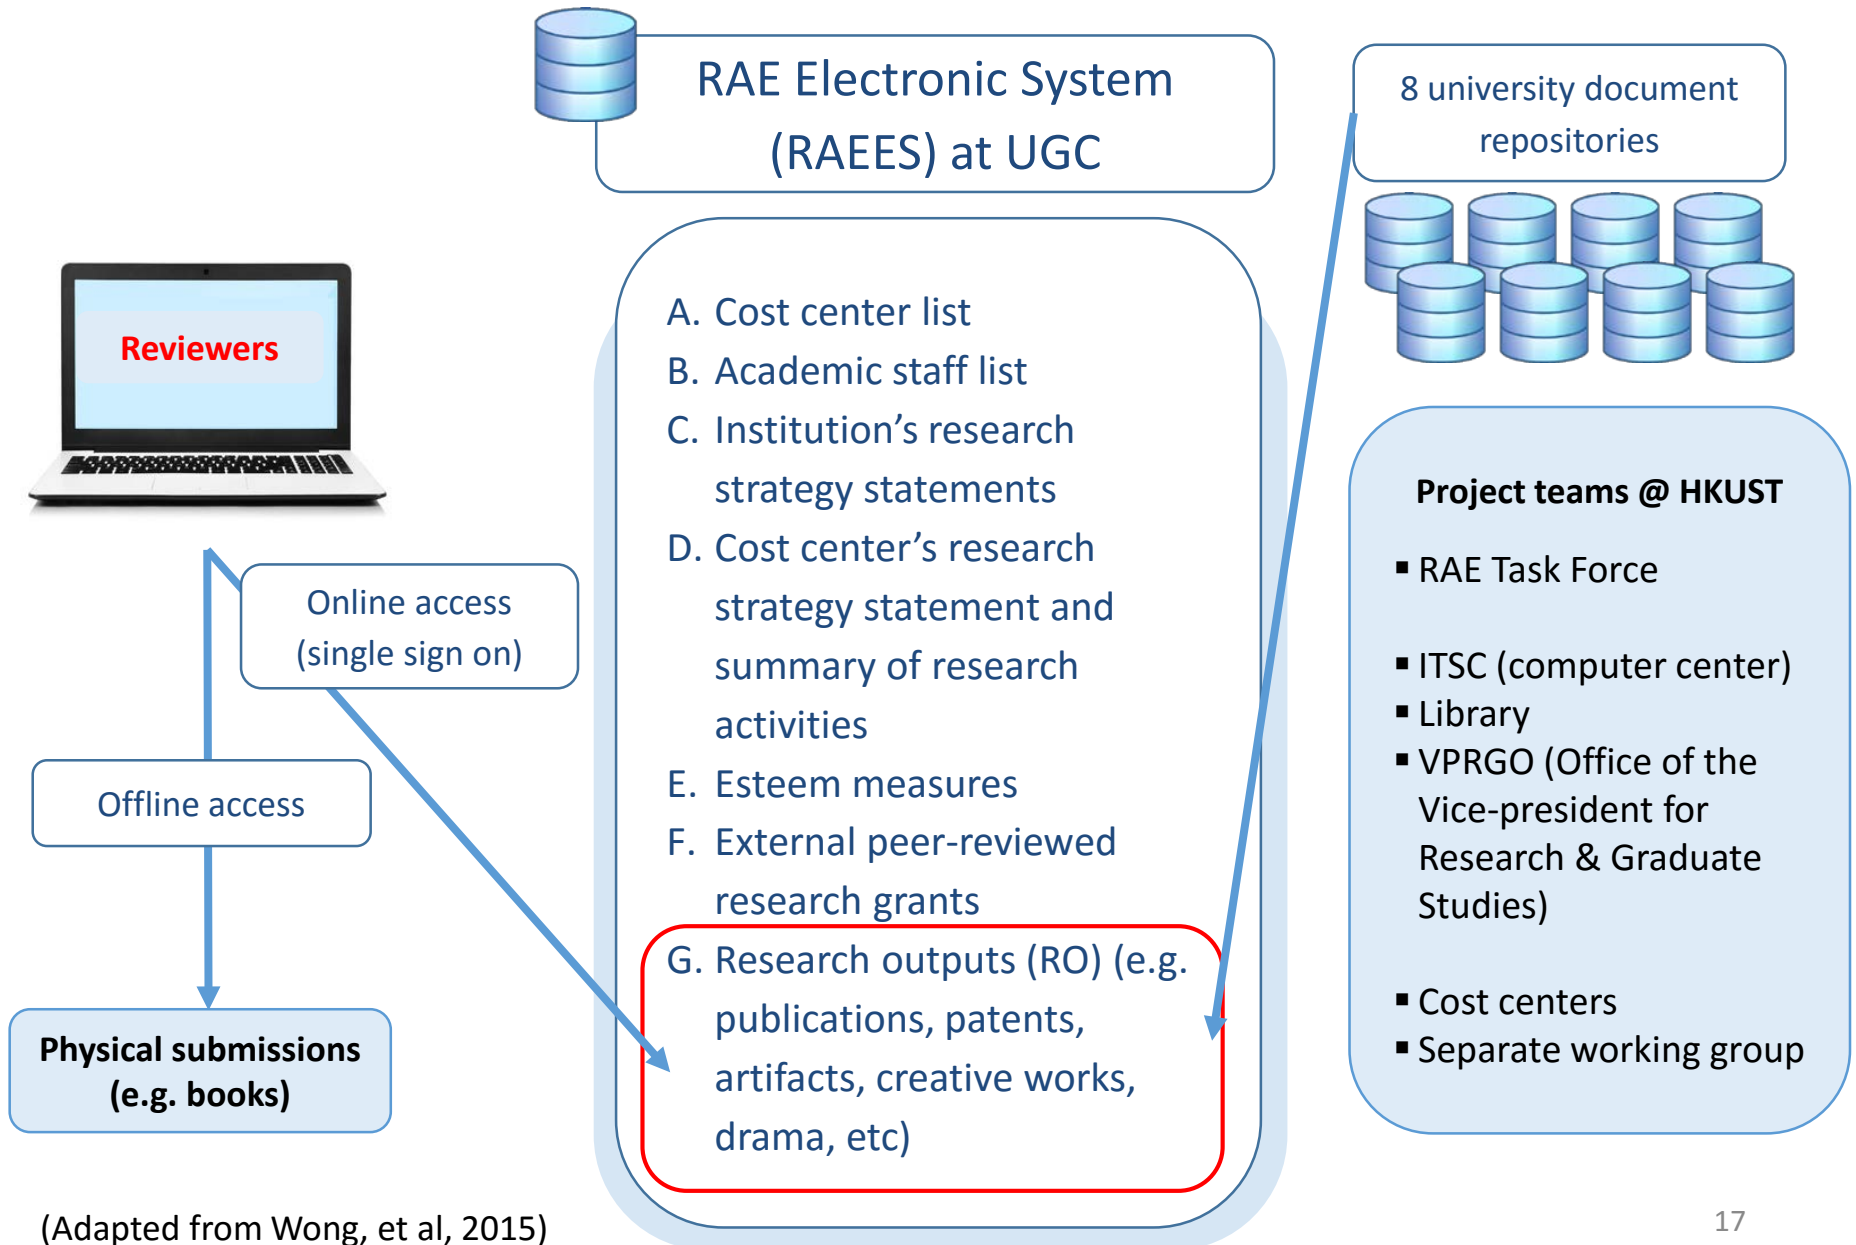

- Build a central RAE Electronic System (**RAEES**)
- Collect data from 8 institutions and provide access interface to reviewers
- Each institution need to build a document repository to host its full-text files

## Copyright

- Seek permission from publishers
- Negotiate a transactional license with the Hong Kong Reprographic Rights Licensing Society (HKRRLS)

# RAEES and Document Repositories

# HKUST Library's Participation in 3 Stages

## One: Design Stage

### Design in RAEs and Repositories

- RAE Electronic System
- RAE Online Submission System
- Document Repository

### Copyright Permissions or Clearance

- 140 major publishers
- Individual requests to minor publishers

## Two: Formation Stage

- 4 library teams (copyright, metadata, communication, and full-text team)
- Training for cost centers
- Dry Run (mock-up exercise)

## Three: Data Processing Stage

- Cost center administrators coordinated with researchers to select ROs to be submitted
- Library Team verified the eligibility of ROs, the metadata and the full-text version

### Library Expertise in

- System design (repository)
- Copyright
- Metadata

# Benefits of RAE to the Library

- Library's contributions and effort were highly and widely recognized by the university administrator, department heads, staff and cost centers
- Helped the Library to raise the awareness of Scholarly Publication Database (SPD) developed by the Library
- Faculty/researchers were more motivated to report errors and missing items
- Build institutional partnership and participate in new projects/initiatives including:
  - Research output data cleansing project
  - University research information system

# SPD Metadata Cleansing Exercise

## Background

- Besides RAE, UGC also requires information about the activities of the UGC-funded institutions every year
- At HKUST, annual data submission: Office of Institutional Research (OIR) and the Research Office (RO)
- **Problem: “Incomplete and Incorrect Data on Publication Record”**
  - Missing data (e.g. author details, affiliation, etc)

## Importance of Maintaining Accurate Publication Records

- University Ranking (T.H.E., QS, etc)
- University performance review (UGC)
- School / department review
- Faculty merit review

# SPD Metadata Cleansing Exercise

## Background

- VPRGO, OIR RO and Library agreed to submit SPD data for UGC 2016/17 reporting
- The Library started a SPD Metadata Schema Revamp project in summer 2017. Add new fields (incl. **CDCF fields**) to support UGC reporting
  - Research output type and categories
  - Number of authors
  - Date published in print / online
  - Author affiliation type
  - Affiliation of non-HKUST co-author, etc

### At a Glance

- >4,700 records processed
- Time: 2 months (completed in mid Sept)

## Moving Forward

- Enhance Research Output Reporting System <> SPD **data synchronization**
- Establish workflow with authors in handling incomplete data
- More automated process in packaging data for submission
- Check/clean publication for 2013, 2014 and 2015 to prepare for **RAE 2020**

\***CDCF** – Common Data Collection Format, developed by UGC to collect statistical data from the UGC-funded institutions)

# Final Thoughts and Recommendation

- Ensure researchers have **seamless access** to high quality research content
- Support researchers in **scholarly communication** (e.g. publishing, copyright, etc)
- Facilitate collaborative management of documents and data; provide **virtual research environment** (VRE) tools and services to researchers
- Promote and exploit **new technologies** (e.g. social media, altmetrics, etc)
- Rethinking about **Institutional Repository** (roles and strategies)
- Library Roles in **University research assessment (e.g. RAE 2020), University Ranking**
- Importance of institutional **partnerships** (e.g. Research Office, Knowledge Transfer Office, etc)

**Thank you**
