## SNU Digital Library

#### Content

- Rare books, First issued journals(2,400 titles)
- Insect specimen (400,000)
- SNU historical archives (480,000 images)
- Music collections (AOD/VOD 3,200 files)
- Art collection (8,800 works)
- Academic Events (AOD/VOD 999 files)
- Medical Contents (196,313 slides, others)

## Five Challenges and Issues

## 1. What to Collect

- Analog data is not just a reflection of different technology but is a presentation of different disease spectrum.
  - Chemoprevention of Rheumatic heart disease
  - Prenatal detection of congenital heart diseases
- Number of slides with metadata/total number of slides scanned: 47,290/196,000 (24% with metadata)
  - Pathology: 39,264/87,200+ slides
  - Orthopedic Surgery: 3,264/16,441 slides
  - Plastic Reconstructive Surgery: 0/8,333 slides
  - Radiology: 3446/3446+ slides
  - Forensic Medicine: 991/1,900 slides
  - Nuclear Medicine: 51/1,500 slides
  - Parasitology 274/1,400 slides
  - ENT: 0/1000+
  - Thoracic Cardiovascular Surgery: 0/1000+
    - (+ 50,000 slides in 2003 and 28,000 slides in 2004)

#### 2. Metadata

- Scanning speed far exceeds metadata gathering speed.
- Dublin core metadata structure.
- Convenient data input program + excel input
- Participation of medical students & professors
  - Medical students are biggest user
  - Weekly salary of U\$125 for 8 weeks x 28
  - Case based salary of 40 cents to student and 30 cents to professor
- Group metadata for slide groups

#### 3. Use in the Lecture

- Topic of the session: Basic understanding
- Search at Naver.com: Study on the knowledge of the general public
- Search at google.com: Study on the knowledge of the general public international level.
- Search at Medcon.snu.ac.kr: Study on our content
- Search other related professional sites.

#### 4. Update the Library

- Case Conference
- Hospital information system, Electronic Medical Record and Picture Archiving Communication System
- Ontology

5. Collaboration; Sharing Digital Contents

- Neutral position in Korea and invitation to other medical schools
- PRDLA/PNC/ECAI
  - Technology shared
  - Content and metadata collected together
  - User participation from all
- As a part of Global Health Library of WHO

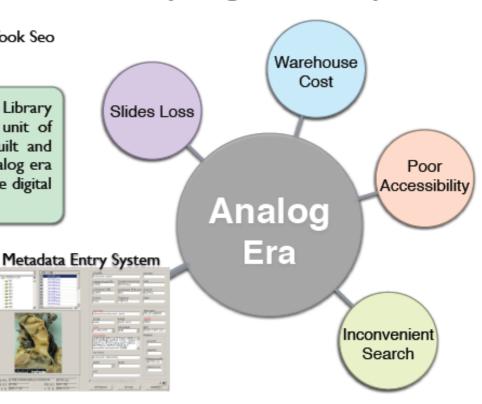

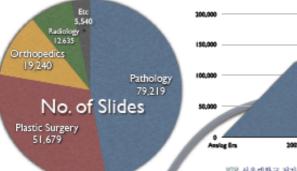

## Slide-based Digital Contents Management for Medicine at Seoul National University Digital Library

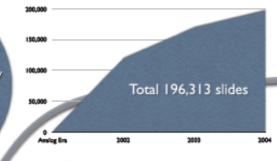

Jeong Mok Cho, Min Ji Kim, Eun Kyung Park, Young Sook Whang, Seong Joong Kim, Jun Kim, Jeong-Wook Seo Seoul National University Medical Library

We established the Seoul National University Digital Library based on the concept of a slide as a fundamental unit of knowledge, and metadata for the unit slide were built and utilized. Images and tables from plastic slides in the analog era are converted into digital images, and new images in the digital era are to be used as additional sources of contents.

#### Jul 2002 ~ Aug 2003 - Gathering Medical Slides

Oct 2002 Constitution of task force team for metadata system

Oct 2002 Digitalization of medical contents

~ Dec 2002 (118,313 slides from 6 departments)

Creation of metadata system & guideline for entry

Building basic metadata

Dec 2002 Digital library opening

#### Jan 2003∼ Aug 2003 - Building Medical Contents

Building advanced metadata

(by content experts: staff members, residents and medical students)
Additional 50,000 slides from another 6 departments

Dec 2003~ May 2004 - Maintenance Period

#### Jun 2004~ Dec 2004 - Elaborating Medical Contents

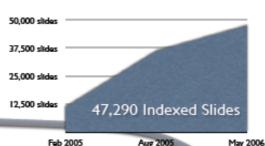

Maintenance & elaboration of constructed metadata and contents Developing specialized website for digitalized medical contents Additional 28,000 slides

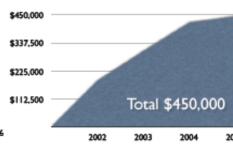

#### - UMLS -Unified Medical Language System

- 47,290 slides were indexed from 69,669 selected slides
- 15.6% needed no human effort
- 52.3% is easy to index (from recommended terms)
- Only 32.1% needed interpretation

#### Additional 28,000 slides

Automated
15.6%

No Match
32.1%
Automated
Indexing
Efficiency
Approximation
52.3%

#### Dec 2004 - More Improvements were Needed

Only raw contents, patient privacy problem.

Planning to organize and select contents (69,669 slides from 196,313 slides)

#### Dec 2004 ~ Jan 2005 - New Approach with UMLS

In Digital Era, searching synonyms was impossible.

UMLS ontology system has been applied to our content management system.

#### Jan 2005 ~ Mar 2005- Developing Automatic Indexing Module

Automated indexing program made it easy to categorize contents.

Saving human effort & cost (10,868 slides were indexed by program)

#### Mar 2005 ~ May 2006 - Elaborating Medical Contents

Maintenance & elaboration of constructed metadata and contents

May 2005	Constitution of task force team for metadata indexing	
May 2005	Indexing and grouping digital contents	
~ Aug 2005	(25,061 slides from 69,669 selective slides)	
Aug 2005 ~	Developing specialized website for indexed contents	

Aug 2005 Indexing and grouping digital contents

~ Aug 2002 (11,361 slides from 69,669 selective slides)

## Informatics Era

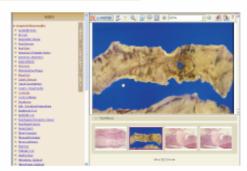

Aug 2005 ~ Aug 2005

~ Aug 2002

Developing specialized website for indexed contents Indexing and grouping digital contents

(11,361 slides from 69,669 selective slides)

Please visit http://medcon.snu.ac.kr for more information.

Electronic Medical Records

Case Conference Data Integration Era

User Created Content Collection of contents from patients through the electronic medical records in our hospital is one part, and invitation of contents from other medical school in Korea and other countries is the other part.

We have developed practical methods using the digital library for laboratory at the medical school and further expansion on the use of contents are under research.

#### **Medical Contents**

## **Future**

- Breaking gap between knowledge creator and user
- Breaking gap between have's and have-not's for knowledge
- But critical assessment on the quality and value of the content
